## SUMMARY

I am a recent Information Technology graduate from Hanoi University of Science and Technology, specializing in Computer Vision and Natural Language Processing, with a strong foundation in machine learning and deep learning. My work focuses on designing, training, and deploying deep learning models through research and academic projects, with an emphasis on building efficient, scalable AI systems for real-world applications.

## EDUCATION

|                                                                                                                                                  |                                                   |
|--------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------|
| <b>Hanoi University of Science and Technology (HUST)</b><br><i>Bachelor of Information Technology, Global ICT Program</i><br><b>GPA: 3.8/4.0</b> | Hanoi, Vietnam<br><i>Sep, 2022 – Jul, 2026</i>    |
| <b>Tran Phu Gifted High School</b><br><i>Specialized Student in Informatics, High School Diploma</i><br><b>GPA: 9.37/10</b>                      | Haiphong, Vietnam<br><i>Jul, 2019 – Jul, 2022</i> |

## SKILLS

|                            |                                                                                      |
|----------------------------|--------------------------------------------------------------------------------------|
| <b>ML / DL</b>             | PyTorch, TensorFlow, OpenCV, spaCy, NLTK                                             |
| <b>Programming</b>         | Python, C++, Java, SQL                                                               |
| <b>Tools &amp; Systems</b> | Linux, Git, GitHub, Docker                                                           |
| <b>Foundations</b>         | Data Structures & Algorithms, Linear Algebra, Probability & Statistics, Optimization |

## HONORS & AWARDS

|                                                                                                                                                                                |                  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>EVN Scholarship, Academic Year 2025–2026</b>                                                                                                                                | <i>Dec, 2025</i> |
| <b>HUST Certificate of Merit for Excellent Student, Academic Year 2024–2025</b>                                                                                                | <i>Oct, 2025</i> |
| <b>HUST Academic Achievement Scholarship, Grade: Excellent</b><br>Awarded to top 8% of students with outstanding academic performance in semesters 2023.1, 2024.2, and 2025.1. |                  |

## EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------|

| <b>SoICT, HUST</b><br><i>Teaching Assistant</i>                                                                                                                                                                                                                                                                                                                                                                                                                                     | Hanoi, Vietnam<br><i>Sep, 2024 – Jul, 2026</i> |
| <ul style="list-style-type: none"><li>– Supported 300+ students across Data Structures &amp; Algorithms, OOP, and ITSS Software Development courses.</li></ul>                                                                                                                                                                                                                                                                                                                      |                                                |

- Guided coding and software development, reviewed assignments, and received recognition for outstanding teaching support.

## PROJECTS

---

### LinguaSync: Real-Time Multilingual Messaging Assistant

[Demo](#)

- Built a real-time multilingual chat platform to reduce language barriers in cross-border communication, addressing inconsistent domain terminology and sensitive-data exposure through glossary-aware translation and PII masking.
- Developed an AI translation pipeline with intelligent routing between NLLB and LLMs, integrated with Next.js, FastAPI, PostgreSQL, background workers, and SSE for scalable text and voice translation.

### Improving Unified Models for Sign Language Understanding

*Graduation Thesis*

- Proposed **Uni-Sign-Semantic** with Cross-Part Interaction and Visual-Semantic Alignment modules, leveraging multi-head cross-attention, partial optimal transport and contrastive learning for body-part interaction and visual-text alignment.
- Achieved **93.80% Top-1 accuracy** on WLASL100 for Isolated Sign Language Recognition, **25.92% WER** on CSL-Daily for Continuous Sign Language Recognition, and **27.49 BLEU-4** for Sign Language Translation task, demonstrating consistent improvements over the baseline and related approaches.

### Sentiment Analysis App

[GitHub](#)

- Built a full-stack sentiment analysis system for YouTube comments, covering data collection, preprocessing, feature engineering, and classification.
- Developed and evaluated sentiment models using traditional machine learning, Bi-LSTM, and RoBERTa.

### Fake News Detection

[GitHub](#)

- Built a multi-domain fake news classifier across COVID-19, politics, and entertainment.
- Fine-tuned and ensembled XLNet, RoBERTa, and DeBERTa for robust cross-domain performance.

## LEADERSHIP & EXTRACURRICULAR ACTIVITIES

---

### SoICT Student Volunteer Team (VIT), HUST

Hanoi, Vietnam

*Head of Administrative Affairs Department*

*Dec, 2022 – Dec, 2024*

- Managed operations for more than 200 volunteers across large-scale university campaigns.
- Awarded a Certificate of Merit for sustained leadership and contributions.

### Youth Union – Student Association, SoICT, HUST

Hanoi, Vietnam

*Member, Information & Foreign Affairs Department*

*Dec, 2023 – Jul, 2025*

- Coordinated communications and external relations for more than 5 student-led events, supporting partnerships with academic and industry organizations.
